Dispenser programme advice

We want to fight diseases and infections before they develop. To this end, we have been developing and producing effective and efficient products for professional hand disinfection in industry, the consumer goods and the healthcare sector under the brand name decosept® for over 30 years.

In addition to the decosept® hand disinfection line, we also offer a wide range of innovative dispensers and pump systems for first-class protection against viruses and other infectious diseases. Whether modern, non-contact plastic or robust metal dispensers, disinfection stands, autoclave-compatible or disposable pumps: You will find that we have the perfect system for every application and requirement!

## Wall and table dispensers

Wall or table dispensers are space-saving installations to make hand disinfection available at all times. They are particularly suitable for hospitals, laboratories, health and care facilities, commerce, industry, etc. They are available as touch-free dispensers with sophisticated sensor technology or as a tried-and-tested operating lever model. In both versions, the focus is on reliable dosage and hygienic dispensing.

### Disinfectant dispenser, ingo-man plus model

Housing in matt silver made of anodised aluminium, autoclave-compatible and dishwasher-safe, suitable for wall mounting

Available in two versions for 500 mL or 1000 mL disposable Euro bottles:

- with short or long stainless steel operating lever
- contactless

### Disinfectant dispenser, RX model

Housing made from white plastic

Available as:

- wall-mounted model with stainless steel operating lever, incl. drip tray
- combination wall or table model, contactless

	Wall dispenser	Table dispenser	Short operating lever	Long operating lever	Contactless	for 500 mL container	for 1000 mL container	Housing can be autoclaved

# Pumps and replacement pumps for wall and table dispensers

Select the dosing pump that meets your requirements and hygiene programme, from a wide range. Does it need to be as durable as possible and reusable or do you prefer a disposable alternative? Whatever the application and requirements, we have the right pump for intensive care units, nursing homes, public administration buildings, commercial kitchens, etc.

## Stainless steel pump for ingo-man plus dispenser

- durable and autoclave-compatible
- adjustable dosage (approx. 0.75 / 1.0 / 1.2 / 1.5 mL per pump)

## Plastic disposable pumps for ingo-man plus dispenser

- for single use; made of recyclable plastic
- in hygienic individual packaging
- dosing quantity 1.5 mL per pump

## Dosing pump for decosept® containers

Our practical disposable pumps, suitable for our decosept® containers, are particularly hygienic. Due to their single use (container emptying), they offer protection against contamination of the filling material and time-consuming and cost-intensive reprocessing is no longer necessary. A suction tube with valve prevents overrun and dripping.

### Available variants:

- dosing pump for 500 mL containers of the decosept® product line (art. No. 60001)
- dosing pump for 1 000 mL containers of the decosept® product line (art. No. 60018)

## Hand disinfection stand

Optimal placement in the right place is just as important as the reliability and functionality of the dispenser. Our hand disinfection stand, in a modern design, combine functionality and appearance and are particularly suitable for use in reception areas or in high-traffic pedestrian locations. Personalise your stand's front panel and make it eye-catching. Use the many design options with your company logo, picture, coat of arms, etc. to show it off perfectly.

## Extended programme - Monitoring system

Have you not found a suitable dispenser solution or are you looking for a monitoring system in hand hygiene? Contact us, we will help you.

Benefit from our over 30 years of experience in hand disinfection. To learn more about our decosept® hand disinfectants, contact us at [hygiene@borer.ch](mailto:hygiene@borer.ch) or through your Borer representative.
